Maddison Safety Vending Solutions

Maddison Safety Vending Solutions have spent the last 15 years working on the efficiency of our vending solutions to allow our customers to enjoy robust & dependable inventory results.

Our system delivers a simple and effective method of dispensing essential PPE & consumable products on site 24/7. This form of controlled vending also provides customers with substantial cost-savings, increased productivity and process improvements.

We have vending machines customised to meet the needs of small, medium and large businesses.

Our machines are reliable and simple to use while also being environmentally friendly as all machines are managed using Maddison Safety's 3 point recycling process.

One of the keys to the Maddison Safety Vending Solution is the service we offer. We provide a refilling and maintenance service to our Vending Customers on a weekly, fortnightly or monthly basis - dependent upon usage and your site requirements.

Operations

- 24/7 Automated stores access
- Increase productivity
- Increase hygiene & social distancing
- Track usage - to allocated jobs

People

- Integrate existing HR access systems
- Guaranteed access to PPE
- Increase user accountability

Environment

- 3 point reduce reuse recycle with all vending products & packaging

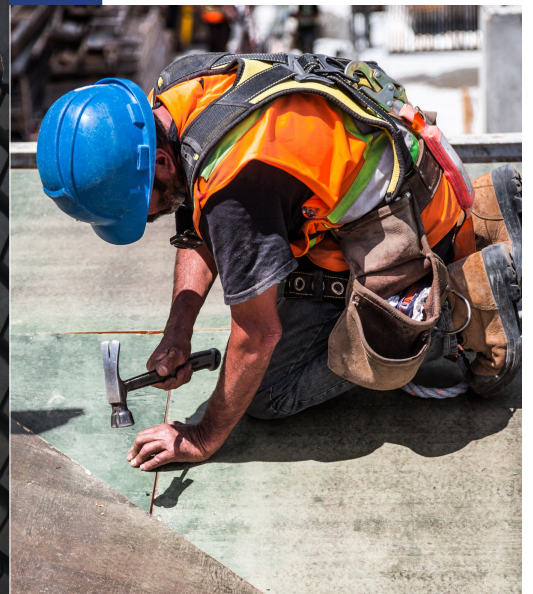

Safety

- Real time access to PPE usage - audit tool
- Ensure correct PPE available for all workers

Commercial

- Reduce costs of consumable spend across business
- Reduce business admin costs

Customer Benefits

Substantial Cost Savings

- Controlled distribution and usage of PPE and industrial consumables by eliminating product waste and unauthorised usage
- Reduction in procurement/stores costs
- Reduces inventory costs
- Option to lease or buy machine(s)
- Rental agreement includes ongoing maintenance and servicing

Increases Productivity

- Continual supply of essential products, 24/7, 365 days a year
- Machines can be placed wherever required, not limited to one location in the store
- Reduces labour required for physical inventory
- Safety and industrial consumables can be co-located at one point of use

Process Improvements

- Automated and customised product usage reports can be used for inventory management, budgeting, cost recharge and operation/production reviews
- Improved access control and user accountability
- Protects consumables from dust and damage
- Assists with PPE compliance

Simple and Easy to Use

Step 1.

Swipe the appropriate access card across the keypad of the small red-black module.

Step 2.

Select item code. The machine will automatically start to vend the selected product.

Step 3.

Access the product shoot at the base of the machine to retrieve you vended product.

NB: If the product does not drop first time simply repeat the process to vend the item. The transaction is only complete once a product drops into the receiving bin.

Maddison Safety's 3 Point Recycling Process

REDUCE - REUSE - RECYCLE

Maddison Safety takes environmental impact very seriously and is constantly working on new ways to ensure that our ability to recycle or reuse is always improving.

We use a **Reduce - Reuse - Recycle** model with all of our vending products.

We have recently begun engaging with Plastic Police to further our ability to recycle more than just packaging & have now started to recycle PPE - Hard Hats, Glasses & Face Masks, for our customers - We are also changing to plant and bio-based material packaging in 2022 for our own Maddison Manufactured Range of products .

REDUCE

Maddison Safety works to cut waste at as many different places as possible. Our team depackages all vending products - allowing us full control of the Reuse & Recycle for all vend product packaging. We source products with the least amount of plastic packaging.

REUSE

Our process includes the reuse of plastic & cardboard packaging. This process has reduced the amount of packaging ending up in landfill by at least 70 percent.

RECYCLE

All items unable to be reused are recycled - Maddison Safety has diverted 1.7 cubic metres a week of waste from landfill over the past 10 years.

Products that can be dispensed from our Vending Machines :

Personal Protective Equipment

- Protective coveralls
- Safety vests
- Gloves
- Sunscreen, insect repellent and more
- Earplugs
- Safety glasses
- Safety goggles
- Respiratory products
- Hydration products

Other Consumables

- Hand tools – pliers, shifters, etc.
- Abrasives and grinding discs
- Batteries
- Allen keys
- Stationery supplies
- Tape measures
- Labeller cartridges
- Tapes, including adhesive, masking and electrical
- First aid supplies

Real-Time Reporting

Maddison Safety has a web-based maintenance and monitoring software system that has the capability to control and monitor our vending machines. This system tracks and monitors all transactions - by employee, machine, product, etc. From this data, the customer can generate their own usage reports.

Advantages of vending machine reporting system

- Real time internet based data transfer allows for instantaneous reporting
- Automated pick lists for vendor management teams
- Automated SMS alerts for stock-outs
- Automated alerts for excessive usage
- Ability to integrate with existing maintenance systems
- Custom designed reports

Integration of existing Swipe/Access Systems

Maddison Safety's vending software has the ability to interact with a customer's existing site access system which removes the requirement for an extra database to be created and maintained.

Maddison Safety liaise with card issuers HR admin on site to custom build swipe modules. If your site does not have a current access system, Maddison Safety can provide tags or swipe cards to control access and identify users.
